

TARGETED THREAD

Phishing is the #1 entry point for cyberattacks

3.4B

phishing emails sent every day worldwide

\$4.88M

average cost of a data breach in 2024 (IBM)

74%

of breaches involve a human element (Verizon DBIR)

Why now?

AI-generated phishing has exploded since 2023. Attackers now craft flawless, personalized messages at scale - traditional filters miss them.

WHAT IS THIS PRODUCT

Real-time phishing protection in your pocket

Phishing Detector is a mobile app that detects phishing in URLs and emails in real time, using a machine-learning model trained on phishing indicators. Users get a clear verdict - safe or threat - within seconds.

How users experience it

Paste a suspicious link or choose an email from your Gmail box → tap scan → get a verdict in seconds.

Instant verdict

Results in seconds.

ML-driven

Continuously learning model.

Privacy-first

No raw content stored on our servers.

UNDER THE HOOD

A simple 4-step flow, powered by ML

1. User submits

Pasted URL or chosen email to scan in the mobile app

2. API receives

FastAPI backend validates & routes the request

3. ML classifies

Inference service scores the input

4. Verdict

Safe / Suspicious / Phishing — in seconds

Stack: React Native (mobile) · FastAPI (backend) · Python ML inference service · Docker contenerization · Firebase Auth

WHY PHISHING DETECTOR

Built for today's threats - not yesterday's filters

Traditional anti-phishing

- ❌ Black-box decisions, no user feedback
- ❌ Generic rules miss AI-crafted messages
- ❌ Desktop-centric, weak on mobile
- ❌ Signature-based detection

Phishing Detector

- ✅ Fast native mobile app
- ✅ Designed for end users, not just IT admins
- ✅ AI explanations: tells the user WHY it's risky
- ✅ Sub-word level pattern recognition

WHO BUYS IT

Mid-market & enterprise with mobile-first workforces

Industry

- Banking & FinTech
- Healthcare
- Logistics & retail
- Public sector

Company size

- Mid-market: 250–2,000 employees
- Enterprise: 2,000+
- BYOD / mobile-heavy ops
- Distributed / remote teams

Buyer role

- CISO / Head of Security
- IT Director
- Security Operations lead
- Compliance officer

MONETIZATION STRATEGY

SaaS subscription — priced per seat, per month

Starter

€3

/ user / month

- URL & email checking
- Mobile app (iOS + Android)

MOST POPULAR

Business

€7

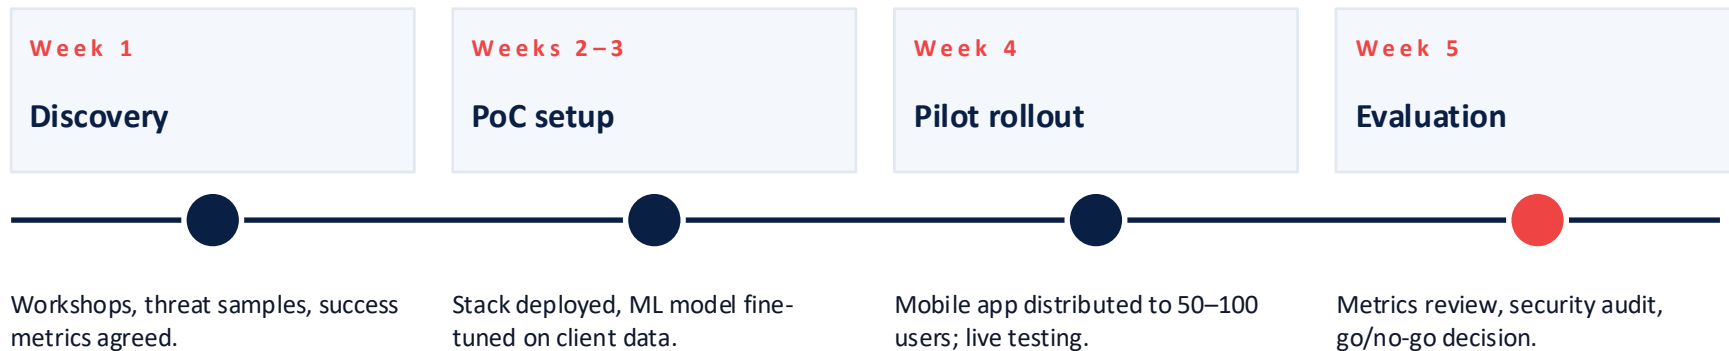

/ user / month

- Everything in Starter
- Admin dashboard
- AI phishing analysis insights

PROOF OF CONCEPT TIMELINE

From kickoff to pilot in 5 weeks

PoC includes:

Working mobile app · Custom-tuned ML model · User interface · Deployment scripts · Final report & demo

MVP DELIVERY

Lean team, modern stack, 8 weeks to MVP

4–5

people in the core team

5 weeks

from kickoff to working PoC

8 weeks

to production-ready MVP

Tech stack

React Native — iOS + Android mobile app

FastAPI — Python backend (REST API)

Python ML inference service

Docker containerization

Firebase Auth — secure mobile sign-in

WHAT COULD GO WRONG

Risks we've identified - and how we mitigate them

False positives flag legitimate emails

Mitigation: User feedback loop + confidence threshold tuning; allowlists for trusted senders.

Attackers evolve faster than the model

Mitigation: Continuous retraining pipeline; weekly threat-intel feeds; A/B testing of model versions.

Data privacy & compliance (GDPR / HIPAA)

Mitigation: On-device pre-processing; encrypted transport; option for on-prem / EU-region deployment.

Low user adoption inside the org

Mitigation: Frictionless onboarding via Firebase Auth; share-sheet integration; admin-led pilot rollout.

LET'S MAKE IT REAL

Ready to protect your team from the next phishing wave?

What we need from you to start the PoC

- ✓ Sample phishing & legitimate message datasets
- ✓ 1 technical point of contact (security or IT)
- ✓ Access to a pilot user group (50 - 100 users)
- ✓ Sign-off on PoC scope & success criteria

Thank you.
